

TABLE 4. Odds ratios from multivariate logistic regression analysis assessing the association between use of modern contraceptive methods by currently married women and selected characteristics

| Characteristic | Odds ratio (N=27,615) |
|---|--------------------------|
| Socioeconomic status | |
| Extremely poor (ref) | 1.00 |
| Moderately poor | 1.37*** |
| Better off | 1.62*** |
| Education | |
| <complete primary (ref) | 1.00 |
| ≥complete primary | 1.09 |
| Residence | |
| Urban (ref) | 1.00 |
| Rural | 1.23*** |
| Age | |
| 15–34 (ref) | 1.00 |
| 35–49 | 0.60*** |
| No. of living children | |
| ≤2 (ref) | 1.00 |
| 3–4 | 2.20*** |
| ≥5 | 1.41*** |
| Ideal no. of children | |
| Nonnumeric response (ref) | 1.00 |
| ≤2 | 2.03*** |
| ≥3 | 1.39*** |
| District's mean ideal no. of children† | |
| Above national median (ref) | 1.00 |
| Below national median | 1.45*** |
| Exposure to family planning messages in preceding 6 mos. | |
| Not exposed (ref) | 1.00 |
| Exposed to a single source | 1.29*** |
| Exposed to multiple sources | 1.46*** |

***p≤.001. †Not including the respondent. Note: ref=reference group.
