*Significantly different from reference category at p<.05. **Significantly different from reference category at p<.01. ***Significantly different from reference category at p<.001. †Direct risk means an individual had more than one sex partner in the past year. ‡Indirect risk means at least one sex partner in the past year had another partner at around the same time. §The GSS does not categorize Hispanics separately, so for men, the "white non-Hispanic/other" and "black non-Hispanic" categories do in fact include Hispanics.
